

APi Documentation

The architecture:

How to Use

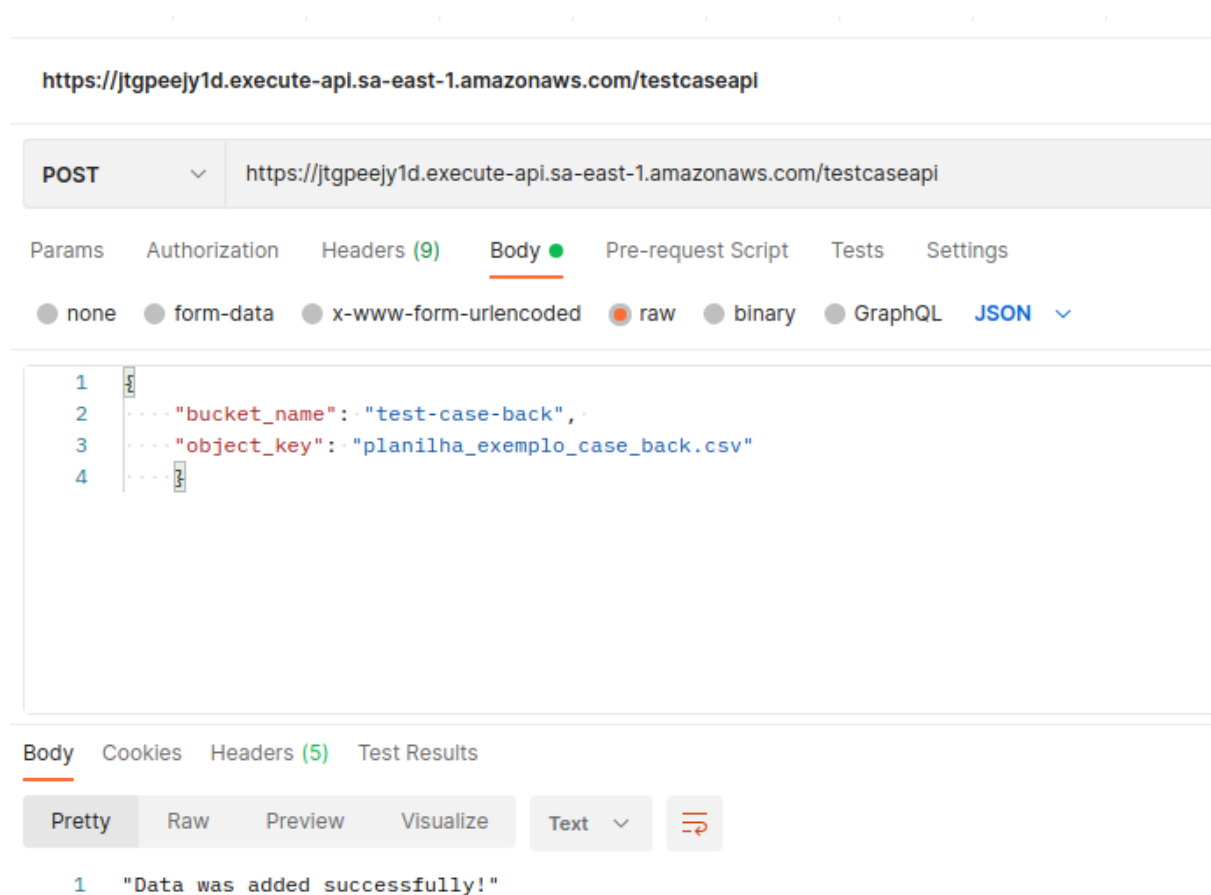

Add a new .csv file (stored in S3) to the DynamoDB:

```
fetch("https://jtgpeejy1d.execute-api.sa-east-1.amazonaws.com/testcaseapi",{
  method:"POST",
  body:JSON.stringify(
    {
      "bucket_name": "test-case-back",
      "object_key": "planilha_exemplo_case_back.csv"
    }
  )
})
.then(res=>res.json())
.then(json=>console.log(json))
```

I am policy used in the aws role to insert data to DybamoDB:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "dynamodb:PutItem"
      ],
      "Resource": "*"
    }
  ]
}
```

Test with Postman:

If you received status request 200, the message will be "Data was added Successfully!"
If not, "Data was not added!"

The dates and CPF/CNPJ should be inserted in DynamoDB with these formats:

🟢 Completed Read capacity units consumed: 1.5

Items returned (33)

CPF_CNPJ	DATA_DE_EMISSAO	DATA_DE_VENCIMENTO
12345678000110	22-05-11	22-06-28
12345678000110	22-05-11	22-08-28
12345678000110	22-05-11	22-06-28
12345678000110	22-05-10	22-08-14
12345678000110	22-05-11	22-11-14
12345678000110	22-05-11	22-06-14
12345678000110	22-07-14	22-05-26
12345678000110	22-05-10	22-07-14
